

OSG Metric: Accomplishments Timeline, Phase I of the Project, March 2008

In the OSG project executive plan of July 2006 we define three phases of the project over the five years of the proposed program of work. The first phase was 18 months – from September 2006 through March 2008.

Months 1-18: Establish the operational procedures of the OSG Facility, improve the dependability of the infrastructure, deploy common storage management software, meet the milestones of the physics collaborations with critical path dependencies on OSG and demonstrate the usability of the infrastructure by additional campus grids and domain sciences.

The above timeline shows when accomplishments towards meeting these goals were achieved.
