OSG User Support Update

OSG Area Coordinators Call

February 12, 2014

Chander Sehgal - FNAL

Overall Opportunistic Usage Last 12 months

Wall Hours by VO (Sum: 88,156,390 Hours)
52 Weeks from Week 07 of 2013 to Week 06 of 2014

The trailing 12 month cumulative usage is
growing at the rate of 1M hours per week

Researcher Enabled in last 12 months

OSG-XD

Project Name	PI	University	Science Domain	Hours

Key Initiatives

1. Effective service delivery for XSEDE Users of OSG – **proceeding well**
2. Enabling new researchers, who contact OSG directly, to access DHTC – **proceeding OK (need more customers – must cultivate new channels)**
3. Engage VO at RENCI is wrapping up; we must transition all the users to either OSG-XD or OSG-Connect/Duke-Connect – **proceeding well**
4. Working with LBNE to enable MC simulations on multiple OSG sites – **just started (similar to work done for SNOWMASS; but there are many stakeholders who want to influence the technical plan)**
5. More opportunistic access; develop a plan for 2014 to increase sites and cycles accessible to the osg vo by 50% – **new initiative (and a big concern since we have very few tools that provide visibility into usage and issues)**

Top Concerns

1. How do we identify more researchers who can benefit from access to OSG DHTC ? *** a priority ***
2. We continue to struggle with inadequate tools for understanding production for our front-end using the Glide-in WMS system; schedule & status of requests to glideinWMS project is unknown
3. Need to develop a plan for site support – especially as we understand the division of effort between gFactory operations and related site support
4. User Support workload has increased to the point that we are now feeling the pain of not having the 0.5FTE planned in the Nebraska SOW for User Support

Other Work Items

1. **Work with Gratia to develop a report that shows all OSG VO usage broken down by submit host (recall we have many host flocking into OSG) – need a complete picture of work done (batch_pilot) via this framework**
 - **OSG-Connect flocking**
 - **Duke-Connect flocking**
 - **iPlant flocking**
 - **VT flocking**
 - **SAGA flocking**
 - **Bakerlab flocking**
2. **Transition UCSD from Engage VO → OSG VO**
3. **Review Intensity Frontier Data Handling plan and provide inputs for FIFE on how to improve and leverage other OSG initiatives**

Recent Accomplishments

1. With assistance from glideinWMS project (we audited the configuration of the OSG-XD frontend) – no major issues identified but some fine tuning done
2. OSG-VO access to opportunistic resources appears to have broken thru the 12K cores barrier; recently achieved >18K cores – a couple of days with over 450K hours (unfortunately we can't explain why we were stuck at 12K cores and what broke the log-jam)
3. Continued to operate the OSG Public storage service (based on iRODs) for the benefit of the OSG VO community; planning to move this services to be hosted at GOC.
