

# User Support Gratia Wishlist

1. **Periodic report that shows all OSG VO usage broken down by front-end/submit-host (recall we have many hosts flocking into the OSG-XD system) – need to show a complete picture of work done (batch\_pilot) in the OSG VO via this framework:**
  1. OSG-XD locally submitted
  2. OSG-Connect flocking
  3. Duke-Connect flocking
  4. iPlant flocking
  5. VT flocking
  6. SAGA flocking
  7. Bakerlab flocking
  8. UCSD Front-end (coming in a few weeks)
1. **Develop a more general solution that deals with the relationship between a VO (batch domain) and various front-ends/submit-hosts that report job specific usage (batch\_pilot domain) – be able to tie certain batch\_pilot probe names as “under” a specific VO (perhaps in the VO definition in OIM?)**

(What is the plan for hardware modernization of the Gratia hosts at FNAL?)
