Overview

- Types of OSG submit points
- **OSG Virtual Organizations**
(members of OSG consortium)
- **Other OSG submit points**
 - OSG Connect
 - OSG Connect Client
 - OSG via XSEDE

Accessing an OSG Submit Point – 4 Ways

1. Local Virtual Organization (VO)

- campus, national lab, or research organization that is part of the OSG consortium (OSG School through the “GLOW” VO)

2. OSG Connect

- an OSG VO and submit server for academics no local VO

3. OSG Connect Client

- software that allows users to remotely submit to OSG Connect from a home cluster

4. XSEDE

- collection of HPC clusters available to U.S. academics via allocations of compute hours

Access Methods: Local VO

Other Access Methods:

Accessing an OSG Submit Point – 4 Ways

	Local VO	OSG Connect	Connect Client	XSEDE
Available to	users with a campus/org VO	affiliates of U.S. research orgs	users of cluster with Connect Client	users with XSEDE allocation
Cost	unlikely	FREE	unlikely	FREE (but need allocation)
Limit on CPU hrs	unlikely	NO	NO	YES (per allocation)
Local Help	very likely (local staff)	unlikely	likely (cluster staff)	possibly* (Campus Champion)
Online Guides	likely	YES	YES	limited
Submit Point Type	submit server (or direct OSG entry server)	direct OSG entry server	cluster submit node to OSG entry server	submit node to OSG entry server

*not all XSEDE Campus Champions will have experience with HTC or OSG

Accessing an OSG Submit Point – 4 Ways

1. Local Virtual Organization (VO)

- campus, national lab, or research organization that is part of the OSG consortium (OSG School through the “GLOW” VO)

2. OSG Connect

- an OSG VO and submit server for academics no local VO

3. OSG Connect Client

- software that allows users to remotely submit to OSG Connect from a home cluster

4. XSEDE

- collection of HPC clusters available to U.S. academics via allocations of compute hours

Virtual Organization (VO)

- institution or research project that is part of the OSG consortium
- accounts and access determined by local VO administrators
- most offer user support or specialized interfaces for their specific setup and population of users

How do I determine whether my institution
is/has a VO?

User/Host Certificate

OSG provides services to issue user and host certificates for your resources. [Link](#)

OSG Operations

OSG Operations / Grid Operations Center at Indiana University provides operations service to the OSG. Link

[OVERVIEW](#)[Introduction](#)[Organization](#)[Research Highlights](#)[Partners](#)[Join the Open Science Grid](#)

What we do

The OSG provides common service and support for resource providers and scientific institutions using a distributed fabric of high throughput computational services. The OSG does not own resources but provides software and services to users and resource providers alike to enable the opportunistic usage and sharing of resources. The OSG is jointly funded by the Department of Energy and the National Science Foundation.

The Open Science Grid (OSG) supports science such as..

- High Energy Physics: CMS and ATLAS
- Nanoscience: NANOHUB
- Structural Biology: SBGrid
- Community VO (multiple sciences): Engage

What OSG is for

The OSG is primarily used as a high-throughput grid where scientific problems are solved by breaking them down into a very large number of individual jobs that can run independently. The most successful opportunistic applications run on the OSG share the following characteristics:

- The application is a Linux application for the x86 or x86_64 architecture.
- The application is single- or multi-threaded but does not require message passing.
- The application has a small runtime between 1 and 24 hours.
- The application can handle being unexpectedly killed and restarted.
- The application is built from software that does not require contact to licensing servers.
- The scientific problem can be described as a workflow consisting of jobs of such kind.
- The scientific problem requires running a very large number of small jobs rather than a few large jobs.

More about OSG

Please see <https://twiki.opensciencegrid.org/> for more information regarding the OSG.

Please see [Documentation](#) for more details regarding available documentation.

Please see [List of Virtual Organizations](#).

The Council governs the consortium ensuring that the OSG benefits the scientific mission of its stakeholders.

Please see [List of Virtual Organizations](#).

The Council governs the consortium ensuring that the OSG benefits the scientific mission of its stakeholders.

The Executive Team manages the OSG project, which is organized into technical team areas.

The OSG is made up of Member Organizations who register with the OSG Operations Center and works with many Partner Organizations.

Virtual Organization

A Virtual Organization (VO) is a set of groups or individuals defined by some common cyber-infrastructure need. This can be a scientific experiment, a university campus or a distributed research effort. A VO represents all its members and their common needs in a grid environment. A VO also includes the group's

If you don't know what VO you belong to or should belong to, please contact the [Grid Operations Center](#) for help.

for contracting individually with each other for guaranteed access to resources.

Many VOs in the OSG address the specific requirements of their users with their own user support that provides more in-depth help than the OSG does. Additionally some VOs provide dedicated resources to the OSG that provide preferred access to their members. Some VOs provide a problem specific user interface to their members.

The OSG assumes that each user is preferably supported by their membership VO. Each VO is expected to register with the OSG and provide support for their members. OSG support is maintained through a VO representative for each VO rather than a member of a VO.

The OSG welcomes researchers that are not associated with a VO! They are welcome to join the OSG or Engage VO. The OSG VO is inviting all users who don't need support running their application on the OSG. The Engage VO provides strong support for scientists who wish to bring their applications to the grid but who are unfamiliar with grid technologies.

If you don't know what VO you belong to or should belong to, please contact the [Grid Operations Center](#) for help.

Using OSG through a VO

1. Determine whether there is a local VO for your institution/organization.
2. Get an account

Contact the administrators to get an account on their glidein server (or submit node tied to a glidein server).

3. Submit jobs

Follow site-specific guides and/or submit jobs as you have been at the OSG School.

Accessing an OSG Submit Point – 4 Ways

1. Local Virtual Organization (VO)

- campus, national lab, or research organization that is part of the OSG consortium (OSG School through the “GLOW” VO)

2. OSG Connect

- **an OSG VO and submit server for academics no local VO**

3. OSG Connect Client

- **software that allows users to remotely submit to OSG Connect from a home cluster**

4. XSEDE

- collection of HPC clusters available to U.S. academics via allocations of compute hours

OSG Connect

osg connect

- Essentially, a VO available to those without a *Local VO*
- Free for affiliates/partners of U.S. research institutions
- Submit from [OSG Connect server](#) or use [Connect Client](#) on another cluster (e.g. Clemson)
- Online guides, software support, and contact info

exercises on
Thursday morning!

Accessing an OSG Submit Point – 4 Ways

1. Local Virtual Organization (VO)

- campus, national lab, or research organization that is part of the OSG consortium (OSG School through the “GLOW” VO)

2. OSG Connect

- an OSG VO and submit server for academics no local VO

3. OSG Connect Client

- software that allows users to remotely submit to OSG Connect from a home cluster

4. XSEDE

- **collection of HPC clusters available to U.S. academics via allocations of compute hours**

- **XSEDE:**
 - a consortium of HPC clusters and other computational services available to academics in the U.S.
- free accounts, but you must request an XSEDE allocation of compute hours
- limited online guides specific to OSG-XSEDE, but similar to submission via osg-ss-glidein-submit

Using OSG via XSEDE

Extreme Science and Engineering
Discovery Environment

1. Sign up for an XSEDE account.
2. Request an OSG allocation

via the XSEDE User Portal to request a startup (or long-term) allocation of compute hours for OSG.
3. Follow XSEDE's guides for connecting to and using the XSEDE submit server.
4. Submit jobs as you have been at the school, making sure to indicate your XSEDE project name (allocation code).

Research Allocations
Research Allocation Deadlines
Writing and Submitting Allocation Proposals

Overview

An XSEDE allocation provides access to computing, visualization, and/or storage resources as well as extended support services at XSEDE service provider (SP) sites. An allocation is allotted to a researcher who serves as the principal investigator (PI) of an approved project. An account is the specific method through which an individual (or community, in the case of science gateways) logs in to a resource to utilize the allocation.

- **Computational Resources:** XSEDE SPs offer a variety of high-performance computing (HPC) and high-throughput computing systems for allocation. Computing platforms include clusters, scalable-parallel systems, and shared-memory systems with various CPU, memory, communication, and storage configurations. It is important that the platform you choose is a good match for your computational plans.
- **Visualization Resources:** SPs provide a variety of visualization resources and software services to the XSEDE user community. These systems provide a powerful way to interact with and analyze data at any scale. For complete information on available visualization resources, visit [XSEDE Visualization](#).
- **Storage Resources:** Several XSEDE SPs host storage platforms providing services such as data management, data collections hosting, and large-scale persistent storage. XSEDE will provide storage allocations both in support of compute/visualization usage and storage independent of those.

Below are links to each resource's user guide. Each guide provides information and instructions on system access, computing environment and running jobs specific to that resource. Resources are listed alphabetically within each resource type: [High Performance Computing](#), [High Throughput Computing](#), [Visualization](#), [Storage systems](#), [Special Purpose](#) systems, [Testbeds](#) and [Software](#)

XSEDE is committed to providing quality, useful documentation to its users. Please feel free to leave your suggestions and comments at the bottom of each user guide.
