Categories:	Green Category

Hi Steve,

Here is some information for the XSEDE POPS system for OSG:

Name = Open Science Grid
Nickname = OSG
Quarterly Allocation = 2,000,000 SUs (1 SU = 1 core hour) Startup Allocation Limit = 100,000 SUs URL for User Info = (user guide in progress)

By the way the quarterly allocation is only for the first quarter and we will change (increase) it based on experience and usage.

I addition we are in touch with Mike Pingleton to get OSG setup in the XSEDE help desk process; he is setting up to send those tickets to osg-xsede-support@opensciencegrid.org.

I hope this gets the process started on your side; please let me know of any questions. Thanks,

Chander
